Detail : Glam Green Rose

During installation, Glam Green & Silver ROSE tiles may present craqueleure (glaze surface cracking). Moisturized tiles increases their volume, which tenses the glaze. When dry, the piece volume decreases and the crackles disappear. We recommend using grout with similar color and tone to the tiles. Grouting avoids moisture to penetrate the tile and also seals all the crackles, so it can be used in wet areas.

Do not let the grout excess dry, and proceed to clean with plenty of water. Clean with soap and water quickly before it dries. You can use a mild anti-limescale cleaner to completly clean the surface. Strong anti-limescale cleaners can damage the metal bright areas, making the darkest shades turn matt.

Use only PH Neutral products to clean.

Durante la colocación del Glam Green & Silver ROSE las piezas pueden craquelar. Al humectar las piezas, aumenta su volumen, lo que produce tensión en el vidriado. Cuando la pieza pierde la humedad, disminuye su volumen y las crepitaciones desaparecen.

Se aconseja emplear juntas de un color y tono similar al de las piezas. Además de que la junta sella la entrada de humedad al reverso de la pieza, también sella todo el craquelado, por lo que se puede emplear en zona húmedas.

No dejar secar la junta para proceder a limpiar con abundante agua. Una vez instalado se puede limpiar con agua y jabón. Si aún hay restos, se puede limpiar con un limpiador de cal de poca intensidad. Los limpiadores de cal fuerte pueden dañar el brillo de las zonas metálicas, matificando un poco las zonas oscuras de la pieza.

Limpiar solo con productos PH Neutro.

Where the stone tells the story of the earth.

Beyond simple aesthetics, capturing the very essence of Earth's history. Kangen features a unique effect in its pieces, created through the reducing firing technique inspired by Japanese ceramics, provoking a reaction in natural elements and giving rise to an effect that evokes the crackling and the very origin of ceramics.

The decorations based on the techniques of "Japanese brushstroke" provide a complement of unique artistic dimension that represent the most emotional part and that add a deep connection with nature and history.

"Decor" represents the beginning and the end of the journey of life. Dynamic brushstrokes that flow with ups and downs and precipitates, capturing the dynamic flow of existence.

Pre-Scored, offers a more blurred representation, symbolizing interaction with the environment.

Oltre la semplice estetica, catturando l'essenza stessa della storia della Terra. Kangen presenta un effetto unico nei suoi pezzi, creato attraverso la tecnica di cottura riduttiva ispirata alla ceramica giapponese, provocando una reazione negli elementi naturali e dando luogo a un effetto che evoca il crepitio e l'origine stessa della ceramica.

Le decorazioni basate sulle tecniche di "pennellata giapponese" forniscono un complemento di dimensione artistica unica che rappresenta la parte più emozionale e che aggiunge una profonda connessione con la natura e la storia.

"Decor" rappresenta l'inizio e la fine del viaggio della vita. Pennellate dinamiche che fluiscono con alti e bassi e precipitati, catturando il flusso dinamico dell'esistenza.

Pre-Scored, offre una rappresentazione più sfumata, simbolizzando l'interazione con l'ambiente.

Art in every line

Where line becomes art, Yoku is born. A collection that goes beyond functionality to become an artistic expression in contemporary interior design. Its lines, some delicate and subtle, intertwine in a visual dance that evokes the complexity of nature. Others, more pronounced and defined, trace unexpected paths on the surface, creating a play of contrasts and perspectives.

Inspired by the irregularity of nature, Yoku celebrates the beauty of the imperfect, the natural, the organic. Its lines, far from perfect, are inspired by the fluidity of water and the growth of plants. This deliberate imperfection brings authenticity and warmth to spaces, inviting relaxation and contemplation. Sophistication in design, with a focus on quality finishes and details..

Dove la linea diventa arte, nasce Yoku. Una collezione che trascende la funzionalità per diventare un'espressione artistica nel design d'interni contemporaneo. Le sue linee, alcune delicate e sottili, si intrecciano in una danza visiva che evoca la complessità della natura. Altre, più marcate e definite, tracciano percorsi inaspettati sulla superficie, creando un gioco di contrasti e prospettive.

Ispirato dall'irregolarità della natura, Yoku celebra la bellezza dell'imperfetto, del naturale, dell'organico. Le sue linee, lontane dall'essere perfette, si ispirano alla fluidità dell'acqua, alla crescita delle piante. Questa imperfezione deliberata apporta autenticità e calore agli spazi, invitando al relax e alla contemplazione. Sofisticazione nel design, con un'attenzione alla qualità delle finiture e dei dettagli.

Art in every touch

Inspired by the painting technique of the same name, Oleo redefines the concept of cladding through a unique artistic language. Its pieces evoke fluidity, transforming spaces into canvases where colour becomes the protagonist.

Inspired by the Organic-Essence trend, which values individuality and creativity through a connection with nature and the beauty of materials in their purest state, the collection was originally conceived as a series of real paintings created with a palette knife on canvas, capturing the essence and texture of oil painting on canvas.

This technique allows the creation of thick, impastoed textures, as well as relief effects and overlapping colours that add dynamism and depth to any environment.

Oleo si ispira all'omonima tecnica pittorica e ridefinisce il concetto di rivestimento attraverso un linguaggio artistico unico. I suoi pezzi evocano fluidità e trasformano gli spazi in tele dove il colore è il protagonista assoluto.

Ispirata alla tendenza Organic - Essence, che valorizza l'individualità e la creatività attraverso il legame con la natura e la bellezza dei materiali allo stato puro, la collezione è stata originariamente concepita come una serie di veri e propri dipinti creati con la spatola su tela, per catturare l'essenza e la consistenza della pittura a olio su tela.

Questa tecnica permette di ottenere texture spesse e impastate, nonché effetti di rilievo e colori sovrapposti che conferiscono dinamismo e profondità a qualsiasi ambiente.

Oleo nace de la inspiración en la técnica de pintura con dicho nombre y redefine el concepto de revestimiento a través de un lenguaje artístico único. Sus piezas evocan fluidez y transforman los espacios en lienzos donde el color se convierte en protagonista.

Inspirada en la tendencia Organic - Essence, que valora la individualidad y la creatividad a través de la conexión con la naturaleza y la belleza de los materiales en su estado más puro, la colección ha sido concebida originalmente como una serie de cuadros reales creados con espátula sobre lienzo, capturando la esencia y la textura de la pintura al óleo ante.

Esta técnica, permite crear texturas gruesas y empastadas, así como efectos de relieve y superposición de colores que aportan dinamismo y profundidad a cualquier ambiente.

The mark of water on stone

Riverwash is characterised by its organic and textured design, inspired by the Organic - Essence trend, which seeks serenity and comfort through a connection with nature and the beauty of materials in their purest state.

Inspired by the majesty of natural stone and its transformation over time, the collection evokes the power of water and its ability to shape landscapes. Its pieces capture the essence of the erosion of rock by the flow of river water, inviting contemplation and creating environments of harmony and authenticity.

Riverwash si distingue per il suo design organico e testurizzato, ispirato alla tendenza Organic - Essence che cerca serenità e comfort attraverso una connessione con la natura e la bellezza dei materiali nel loro stato più puro.

Ispirata alla maestosità della pietra naturale e alla sua trasformazione nel tempo, la collezione evoca la forza dell'acqua e la sua capacità di modellare i paesaggi. I suoi pezzi catturano nel design l'essenza dell'erosione della roccia da parte del flusso d'acqua del fiume e invitano alla contemplazione e alla creazione di ambienti pieni di armonia e autenticità.

Riverwash se distingue por su diseño orgánico y texturizado, inspirado en la tendencia Organic - Essence que busca la serenidad y el confort a través de la conexión con la naturaleza y la belleza de los materiales en su estado más puro.

rigato surface

The rigato effect, characterized by its fine and parallel lines, has been a decorative technique appreciated for centuries. Originally applied to pavements, this effect not only provided an elegant and sophisticated aesthetic but also offered a non-slip texture, making it ideal for use on floors.

Over time, technology and design trends have evolved, and the rigato effect has merged with large-format ceramics. This change has allowed the rigato effect to not only maintain its visual appeal but also benefit from the functional advantages of modern ceramics.

Large-format ceramics, known for their durability, ease of maintenance, and resistance, have revolutionized interior and exterior design. By incorporating the rigato effect, these large ceramic tiles of **120x280 cm and a thickness of 6 mm** offer a unique combination of design and functionality. The precision in modern ceramic manufacturing allows the lines of the rigato effect to be more defined and consistent, creating surfaces that are both visually striking and practical.

Additionally, the versatility of large-format ceramics with the rigato effect allows for use in a variety of architectural applications. From **floors and walls to facades and countertops**, this material adapts to different styles and needs, providing an aesthetic and functional solution for contemporary spaces. The ability to produce large pieces with minimal joints also contributes to a cleaner and more continuous appearance, ideal for minimalist and modern design projects.

The rigato effect combined with large-format ceramics has expanded its application possibilities, offering architects and designers a powerful tool to create harmonious and functional spaces. This transition has not only preserved the classic beauty of the rigato effect but also added a new level of practicality and versatility to its use in modern architectural design.

El efecto rigato, caracterizado por sus líneas finas y paralelas, ha sido una técnica decorativa apreciada desde hace siglos. Originalmente aplicado en pavimentos, este efecto no solo aportaba una estética elegante y sofisticada, sino que también ofrecía una textura antideslizante, lo que lo hacía ideal para su uso en suelos.

Con el tiempo, la tecnología y las tendencias en diseño han evolucionado, y el efecto rigato se ha fusionado con la cerámica de gran formato. Este cambio ha permitido que el efecto rigato no solo mantenga su atractivo visual, sino que también se beneficie de las ventajas funcionales de la cerámica moderna.

La cerámica de gran formato, conocida por su durabilidad, facilidad de mantenimiento y resistencia, ha revolucionado el diseño de interiores y exteriores. Al incorporar el efecto rigato, estos grandes azulejos cerámicos de **120x280 cm y un espesor de 6 mm** ofrecen una combinación única de diseño y funcionalidad. La precisión en la fabricación de la cerámica moderna permite que las líneas del efecto rigato sean más definidas y consistentes, creando superficies que son tanto visualmente impactantes como prácticas.

Además, la versatilidad de la cerámica de gran formato con efecto rigato permite su uso en una variedad de aplicaciones arquitectónicas. Desde **suelos y paredes hasta fachadas y encimeras**, este material se adapta a diferentes estilos y necesidades, proporcionando una solución estética y funcional para espacios contemporáneos. La capacidad de producir piezas de gran tamaño con juntas mínimas también contribuye a una apariencia más limpia y continua, ideal para proyectos de diseño minimalista y moderno.

El efecto rigato sumado a la cerámica de gran formato ha ampliado sus posibilidades de aplicación, ofreciendo a arquitectos y diseñadores una herramienta poderosa para crear espacios armoniosos y funcionales. Esta transición no solo ha preservado la belleza clásica del efecto rigato, sino que también ha añadido un nuevo nivel de practicidad y versatilidad a su uso en el diseño arquitectónico moderno.

where the elegance of water becomes ceramic art.

Following the Retro-Futuristic interior design trend, Acqua combines classic elegance with a cutting-edge touch. Each piece evokes the feeling of moving water, creating a visual rhythm that reflects the fluid nature of the element.

The micro-textures of the surface, add a tactile dimension to each piece, while the pastel tones follow the trend “Mindful Pastel”, which infuse calm and serenity to any space. Soft tones with an expression of joy and vitality, transforming the coating into a work of art that illuminates the environment.

Pieces meticulously worked with reactive granules that produce varied effects on the ovals, creating a play of light and shadow that simulate the waves of water and recalling the artisanal ceramics where the effect and the natural reaction were sought. A differentiated aspect that stands out from other mass-produced ceramics.

Seguendo la tendenza del design d'interni Retro-Futurista, Acqua combina l'eleganza classica con un tocco all'avanguardia. Ogni pezzo evoca la sensazione dell'acqua in movimento, creando un ritmo visivo che riflette la natura fluida dell'elemento.

Le micro-texture della superficie, aggiungono una dimensione tattile ad ogni pezzo, mentre i toni pastello seguono la tendenza “Mindful Pastel”, che infondono calma e serenità a qualsiasi spazio. Toni morbidi con un'espressione di gioia e vitalità, trasformando il rivestimento in un'opera d'arte che illumina l'ambiente.

Pezzi lavorati meticolosamente con granuli reattivi che producono effetti variati sugli ovali, creando un gioco di luci e ombre che simulano le onde dell'acqua e richiamando la ceramica artigianale dove si cercava l'effetto e la reazione naturale. Un aspetto differenziato che si distingue dalle altre ceramiche prodotte in massa.

During installation, Elements COBALT tiles may present craqueleure (glaze surface cracking). Moisturized tiles increases their volume, which tenses the glaze. When dry, the piece volume decreases and the crackles disappear.

We recommend using grout with similar color and tone to the tiles. Grouting avoids moisture to penetrate the tile and also seals all the crackles, so it can be used in wet areas.

Do not let the grout excess dry, and proceed to clean with plenty of water. Clean with soap and water quickly before it dries. You can use a mild anti-limescale cleaner to completly clean the surface. Strong anti-limescale cleaners can damage the metal bright areas, making the darkest shades turn matt.

Use PH Neutral products to clean.

Durante la colocación del Elements COBALT las piezas pueden craquelar. Al humectar las piezas, aumenta su volumen, lo que produce tensión en el vidriado. Cuando la pieza pierde la humedad, disminuye su volumen y las crepitaciones desaparecen.

Se aconseja emplear juntas de un color y tono similar al de las piezas. Además de que la junta sella la entrada de humedad al reverso de la pieza, también sella todo el craquelado, por lo que se puede emplear en zona humedas.

No dejar secar la junta para proceder a limpiar con abundante agua. Una vez instalado se puede limpiar con agua y jabón. Si aún hay restos, se puede limpiar con un limpiador de cal de poca intensidad. Los limpiadores de cal fuerte pueden dañar el brillo de las zonas metálicas, matificando un poco las zonas oscuras de la pieza.

Limpiar con productos PH Neutro.

Cleaning And Maintenance Tips

THE FIRST CLEANING “AFTER INSTALLATION”

The most important cleaning operation is performed immediately after laying the tiles. This involves the complete removal of residues and dirt from the tile placement. An inadequate or late removal of this waste can create a cementitious layer on the tile capable of absorbing all forms of dirt. This may give the impression that the tile gets dirty when the actual problem resides in the surface film of dirt which was not removed immediately after laying. Once the grouting of the tiles is finished, it is important, while the grout is still wet, to carefully remove any excess material immediately. This can be done using a sponge and plenty of clean water, repeating this as many times as necessary. Do not perform the cleaning with metal tools, scrapers or abrasive pads. For stubborn stains, clean with alcohol and lukewarm water and rub with a clean cloth. If they do not disappear, check with the relevant technical department. Once the above mentioned washing is done, another washing should be carried out using basic or alkaline degreasing agents, as acid washing can leave stickiness on the pavement which could help retain dirt. In areas where water is calcareous, it is convenient to dry the surface, in order to prevent the deposition of carbonates which will reduce the surfaces' gleam.

REGULAR MAINTENANCE

Many available cleaning products for general use can be used with our products. For daily cleaning, one can use detergents or degreasing products diluted in warm water, following each product's instructions. It is important that the cleaner does not have oil, animal fat, or soap base. These components may leave an invisible residue whilst absorbing dirt (lime stratifications detergent or residues). It is also important that the tile receives a thorough rinsing with clean water after the cleaning process is complete.The low water absorption and high standards met by all porcelain tiles ensure a product which is easy to maintain. Our products do not require the use of sealants or waxes. These superficial coatings can really affect the performance of the tile in a negative manner. It is important to note that hydrofluoric acid (HF) and derivatives can irreparably damage the tile.

The general steps for regular cleaning of our ceramic products can be summarized as follows:

- Remove any solid or liquid waste from the tile, sweeping with a soft bristle broom or vacuuming.
- Clean up liquid spills as soon as possible with lukewarm water.
- Apply the recommended amount and dilution of the cleaner for the tile (follow the cleaner manufacturer's instructions). The wiper must remain in the tile a minimum period of 5 minutes.
- For unpolished tiles, scrub with a nylon sponge or soft bristle brush. A floor machine equipped with a nylon pad or bristle brush can be used for heavily soiled surfaces. For polished tiles, clean with a nonabrasive cloth.
- Remove the dirty cleaning solution and water with a vacuum cleaner or cloth. Rinse the porcelain tile with clean water and remove again with a vacuum cleaner, mop or towel. It is absolutely essential that all detergent residues are removed completely from the tile. Any remaining detergent that dries on the tiles surface can form a coating that can trap dirt and be very difficult to remove. The tile should be rinsed several times to remove all detergent residues.

During use, the cleaning of the tiles should be similar to window cleaning. Ammonia and even bleach type products can be employed, but both must be diluted in water.

In case of special stains and/or particularly resistant, it is advisable to use specific detergents according to the cleaners' manufacturer. Do not forget that removing any type of stain is easier when it is still fresh.

It is important to always do a pre-test the detergent products result on a small sample of the porcelain.

TILES WITH METALLIC EFFECTS - PVD

This type of tiles require following these recommended guidelines, shown below, for cleaning:

- In general, you can use any non-aggressive and neutral pH product.
- In general, we recommend the use of ammonia-based products (NH3) diluted in water, never directly on the piece.
- You cannot use chemically aggressive products.
- You cannot use products with hydrochloric acid (HCl). The remaining acid products should be used with caution in very diluted concentrations.
- Citric acid and other acidic food products leave stains if left too long to act on the tile. They must be removed as soon as possible.
- The use of powder products of abrasive action is not recommended.

Consejos De Limpieza Y Mantenimiento

LA PRIMERA LIMPIEZA DESPUÉS DE LA COLOCACIÓN

La operación de limpieza más importante se lleva a cabo inmediatamente “después de la colocación de la baldosa”. Esto implica la eliminación completa de los residuos de lechada y de la suciedad de la colocación de las propias baldosas. Una eliminación inadecuada o tardía de estos residuos puede crear sobre la baldosa una película cementosa capaz de absorber toda forma de suciedad, dando la impresión que se ensucia la baldosa, cuando el problema está en la película superficial de suciedad. Una vez efectuado el rejuntado de las baldosas, es importante cuando el material de rejuntado todavía está fresco, eliminar el material sobrante cuidadosa e inmediatamente, utilizando para ello una esponja y agua limpia abundante, repitiendo esta operación tantas veces como sea necesario. No debe realizarse la limpieza del material con espátulas metálicas ni estropajos abrasivos. En el caso de manchas resistentes, limpiar con alcohol y agua caliente y frotar con un paño limpio. Si no desaparecen, consultar con el departamento técnico correspondiente. Una vez efectuado el lavado mencionado arriba, deberá efectuarse un lavado básico o alcalino utilizando detergentes desengrasantes, ya que el lavado ácido puede dejar una untuosidad sobre el pavimento que podría contribuir a retener la suciedad. En aquellas zonas donde el agua sea calcárea conviene secar la superficie para evitar la deposición de carbonatos que disminuyen el brillo superficial.

EL MANTENIMIENTO REGULAR

Muchos productos de limpieza de uso general que están disponibles son aceptables para el uso en nuestros productos. Se puede emplear para la limpieza diaria detergentes o desengrasantes diluidos en agua caliente, según indicaciones del envase del limpiador. La densidad inherente y baja absorción de agua de todos los productos aseguran un producto que es fácil de mantener.

Es muy importante tener en cuenta que el ácido Fluorhídrico (HF) y derivados pueden dañar irremediablemente la baldosa.

Los pasos generales de limpieza regular para nuestros productos cerámicos se pueden resumir del siguiente modo:

- Retirar cualquier residuo sólido o líquido de la baldosa, barriendo con una escoba de cerdas suaves o pasar la aspiradora.
- Limpiar los derrames líquidos tan pronto como sea posible.
- Aplicar la cantidad y dilución del limpiador recomendadas para la baldosa (ver indicaciones del fabricante del limpiador). El limpiador deberá permanecer en la baldosa un periodo mínimo de tiempo de 5 minutos.
- Para baldosas sin pulir, frotar con una esponja de nylon o un cepillo de cerdas suaves. Para superficies muy sucias puede usarse una máquina de piso equipado con una almohadilla de nylon o con un cepillo de cerdas. Para baldosas pulidas , limpie con un trapo no abrasivo o un paño.
- Retirar la solución de limpieza sucia y el agua con una aspiradora o un trapo. Enjuague la pieza con agua limpia y retire de nuevo con una aspiradora, fregona, o una toalla. Es absolutamente esencial para todos los residuos de detergente que se eliminen por completo de la baldosa. Cualquier resto de detergente que se seque sobre la baldosa puede formar un recubrimiento que puede atrapar la suciedad y será muy difícil de eliminar. La baldosa debe enjuagarse varias veces para eliminar todos los residuos de detergente.

Durante su uso, la limpieza de la baldosa debe hacerse de forma similar a la limpieza de cristales. Se puede emplear productos de tipo amoniacal e incluso lejía, ambos diluidos en agua.

En caso de manchas particulares y/o especialmente resistentes, es aconsejable usar detergentes específicos según especificaciones del fabricante del limpiador. No hay que olvidar que la eliminación de cualquier tipo de mancha resulta más fácil cuando ésta todavía está fresca.

Es importante hacer siempre una prueba previa antes de usar los productos detergentes.

BALDOSAS CON EFECTOS METÁLICOS / PVD

En este tipo de baldosas por su especificidad se recomienda seguir las siguientes pautas de limpieza:

- En general, se puede usar cualquier producto no agresivo y con PH neutro.
- En general, se recomienda el uso de productos con base amoniacal (NH3) en concentración rebajada, nunca directamente sobre la pieza.
- No se pueden usar productos agresivos químicamente.
- No se puede usar productos con ácido clorhídrico (HCl). El resto de productos ácidos deben usarse con precaución en concentraciones muy rebajadas.
- El ácido cítrico y otros productos alimentarios ácidos dejarán mancha si se les deja actuar mucho tiempo sobre la baldosa.
- No está recomendado el uso de productos en polvo de acción abrasiva.

Fixing Tips

CARE TO BE TAKEN DURING THE CONSTRUCTION

Our ceramic products can be considered as a final finish in the construction process, so it is advisable to be laid only when the rest of the building works are complete (structures, masonry, flooring, ceilings...); specially the flooring. This will minimize the collateral damage that sometimes occurs when the product is being placed too soon.When porcelain tiles are placed before the end of the construction, one must take special care to protect the piece until the works are finalized.

PRE-FIXING ISSUES

- Upon receiving porcelain tiles it is essential to check if the tone, size and quality meet the required standards in advance, as well as assuring the lack of any visible surface defects. In case of facing any problems, our technical team will be able to study these when informed before laying the product.
- One must choose the proper tools for laying ceramic products (serrated edged comb, rubber mallet, suction cups, spreaders and clamps for laying, jointing rubber float, ...)
- Mix pieces from different boxes.

SUPPORT BASE PREPARATION

The support base for wall or floor for the tiles must be stable, dry, flat and it must have the adequate consistency. This base must never be too hot nor too cold and should be clean. One must not forget to clean any dust, grease or oil leftovers to facilitate an optimal adhesion.It is convenient to use slightly rough support bases, altering any excessively smooth leveling layer, in order to ensure greater adherence.

ADHESIVE CHOICE

The type of adhesive will be determined by the water absorption of each type of tile. In our case, it is advisable to employ the technique of placing a thin layer of cement adhesive of type C2.For formats larger than 30x30cm, we recommend the double-layer-adhesive. This technique involves the appliance of adhesive on the support base as well as on the tile; this technique is strongly recommended for outdoors.The bonding material must be applied with serrated edged comb to achieve a homogeneous adhesive distribution throughout the laying surface, even in the corners of the tile. A non-uniform adhesive layer will cause tensions on the tile, which will create an “eyebrow” effect. It is advisable to follow the instructions of the adhesives manufacturer, particularly for different cement-based bonding materials.

TILE INSTALLATION

The previous handling of the tiles, especially the rectified, must be done with utmost care to avoid scratches or chipping of the tiles. During the fixing process, the surface shall not be marked by graphite materials (pencils) or permanent markers, especially in the case of polished products to avoid potential cleaning problems. In the placement of tiles the use of at least 2mm spreaders is advisable. For locked placement, it is advisable to fix at a distance from 1/3 of the piece, never at half of the piece. In large format porcelain pieces (over 60cm of any of its sides) it is convenient to use leveling clips to ensure the flatness of the pieces (such as the Raimondi leveling system, although there may be other manufacturers recommended in the market).Ç

JOINTS AND GROUTS

The main functions of installation joints are: to absorb deformations of the support, to increase surface adhesion between the parts and the bonding material, and to improve the impermeability of the surface. It is necessary to respect the indications given below:

- Structural joints:** the construction project already takes into account the existence of these joints in the floor coverings. These must also abide when covering the joint with plastic trims.
- Perimeter joints:** it is always appropriate to provide these joints that isolate the tile and bonding material from any structural movements, avoiding tensions with them. Perimeter joints are normally hidden by the skirting board or the tile itself; they must have a width of 5 to 10 mm, and may be empty or filled with deformable material.
- Expansion joints:** allow deformations due to thermal and hygroscopic variations between tiles between the bonding material and the support base. Usually designed with a width of 5-8 mm and surfaces from 25 m2 (in sections of 5x5 m2) indoor and surfaces from 9 m2 (in sections of 3x3 m2) outdoors. These joints must be well executed, this means that they must be flexible, waterproof, well bonded and must reach the base support.
- Installation joints:** those between tiles. Before grouting these must be empty, without any bonding materials. It is not recommended to fix any floor without joints, advising a minimum joint of 2-3 mm The grout used in installation joints must be applied with a rubber float. The market offers a wide range of grouts, which are suitable for each type of tile and temperature as specified by the manufacturer of the grout, in which the type of product to be used, colors and waiting time before grouting should be recommended.

Before grouting, it is advisable to test a small area of the part to determine whether the chosen grout affects or stains the surface of the piece. In this case, one should contact the grout manufacturer. Ask the manufacturer for a suitable cleaner for this type of grip material. A bonding material with a thin granulometry is desirable in order to avoid scratches on the tile during its placement.

Consejos De Colocación

CUIDADOS A SEGUIR DURANTE LA CONSTRUCCIÓN

Nuestros productos se pueden considerar acabados finales en la construcción, por ello es recomendable ser colocados sólo cuando el resto de los trabajos constructivos hayan finalizado (estructuras, mampostería, solados, techos, instalaciones,...) y en especial los productos porcelánicos para suelos. De este modo se minimizarán los daños que pueden experimentar el producto cerámico por haber sido colocados demasiado pronto. Cuando los productos porcelánicos son colocados antes de finalizar la construcción hay que tener especial cuidado para proteger la pieza hasta que se ponga en servicio normal de utilización.

CUESTIONES PREVIAS A LA COLOCACIÓN

- Al recibir los productos cerámicos es importante previamente comprobar si el tono, calibre y calidad son los requeridos, así como la existencia de defectos superficiales visibles.
- Hay que elegir las herramientas y útiles adecuados para la colocación de los productos cerámicos (llana metálica dentada, maza de goma, ventosas, crucetas y grapas para la colocación, llana de goma para rejuntar, ...)
- Hay que mezclar piezas de varias cajas.

PREPARACIÓN DEL SOPORTE

El fondo o soporte para pared o suelo sobre el que se colocarán las baldosas debe estar estable, seco, nivelado o aplomado con la consistencia adecuada, no debiendo estar ni helado ni excesivamente caliente y limpio sin restos de polvo, grasa o aceite. Es conveniente disponer de soportes rugosos alterando los soportes excesivamente lisos o la propia capa de nivelación ligeramente para garantizar mayor adhesión.

ELECCIÓN DEL ADHESIVO

La elección del tipo de adhesivo vendrá determinada por la absorción del agua de cada tipo de baldosa. En nuestro caso, se aconseja emplear la técnica de colocación en capa fina con el uso de Adhesivos Cementosos tipo C2. Para grandes formatos superiores a 30x30cm, se recomienda la técnica de colocación de doble encolado, esto es, aplicar adhesivo sobre el soporte y en la baldosa, en especial en exteriores.

El material de agarre debe aplicarse con una llana dentada para conseguir una distribución del adhesivo homogénea por toda la superficie de colocación incluso en las esquinas de la baldosa, presionando la baldosa sobre el adhesivo todavía fresco. De no ser uniforme la capa de adhesivo provocará tensiones en la baldosa que generan a la larga el efecto “ceja”. Es conveniente seguir las instrucciones del fabricante de adhesivos, en especial para los soportes diferentes de base cementosa.

COLOCACIÓN DE LAS BALDOSAS

La manipulación previa de las baldosas, en especial las rectificadas, ha de realizarse con el máximo cuidado, para evitar despuntados, rayas o desconchados en su superficie. Durante la colocación, no deberá marcarse la superficie de utilización del material con lápices (grafito) o rotuladores indelebles, especialmente en el caso de los productos pulidos para evitar posibles problemas de limpieza de los mismos. En la colocación de las baldosas se recomiendo el uso de crucetas de al menos 2 mm. En colocación trabada es aconsejable la colocación a una distancia de 1/3 de la pieza, nunca a la mitad de la pieza. En pavimentos de grandes formatos (mayores de 60 cm en alguno de sus lados) es conveniente el uso de grapas de colocación para garantizar la planitud de las piezas (se recomienda el modelo de la marca RAIMONDI, aunque puede haber otros fabricantes en el mercado).

LAS JUNTAS Y REJUNTADOS

Las principales funciones de las juntas de colocación son: absorber deformaciones del soporte, aumentar la superficie de adherencia entre las piezas y el material de agarre, y mejorar la impermeabilidad de la superficie. Es conveniente respetar las juntas que se indican a continuación:

- Juntas estructurales:** el proyecto constructivo ya tiene prevista la existencia de estas juntas en el solado que se deben respetar también al colocar las baldosas y éstas se deben recubrir con materiales deformables.
- Juntas perimetrales:** siempre es conveniente prever estas juntas que aíslan la baldosa y al adhesivo de los movimientos de otros elementos estructurales constructivos como paredes-suelos, pilares o puertas-ventanas, evitando tensiones con ello. Normalmente quedan ocultas por el rodapié o la propia baldosa, deben tener una anchura de 5 a 10 mm, y pueden quedar vacías o rellenas de material deformable.
- Juntas de dilatación:** permiten las deformaciones por variaciones térmicas e higroscópicas entre baldosas, adhesivo y soporte. Normalmente se diseñan con una anchura mínima de 5 a 8 mm y en superficies a partir de 25 m2 (en paños de 5x5 m2) en interiores y en superficies a partir de 9 m2 (en paños de 3x3 m2) en exteriores. Estas juntas deben estar bien ejecutadas, esto es, ser flexibles, impermeables, bien adheridas y llegar hasta el soporte base.
- Juntas de colocación:** son las existentes entre baldosa y baldosa. Antes del rejuntado estas juntas deben estar vacías, por tanto sin materiales de agarre de la construcción. Se desaconseja una colocación a junta unida o a “testa” aconsejándose una junta mínima de 2-3 mm.

El material de rejuntado que se utiliza en las juntas de colocación se debe aplicar con una llana de goma. En el mercado existe una amplia gama de materiales de rejuntado, que se adecua a cada tipo de baldosas y ambiente según especificaciones del fabricante del material de rejuntado en las que se debe recomendar el tipo de producto a emplear, colores y tiempo de espera hasta el comienzo del rejuntado. Antes del rejuntado, es conveniente probar en un área pequeña de la pieza para determinar si la lechada elegida decolora o mancha la superficie de la pieza, en cuyo caso hay que contactar con el fabricante del material de rejuntado. Pedirle al fabricante del rejunte un limpiador adecuado para este tipo de material de agarre. Es conveniente que la granulometría del material de rejuntado sea fina, para evitar posibles rayas en la baldosa en su colocación.
